Q10) According to Einstein's special theory of relativity,  
Questions 90 to 100 refer to the following passage:

Any list of the greatest thinkers in history contains the name of the brilliant physicist Albert Einstein. His theories of relativity led to entirely new ways of thinking about time, space, matter, energy, and gravity. Einstein's work led to such scientific advances as the control of atomic energy, even television as a practical application of Einstein's work.

In 1902 Einstein became an examiner in the Swiss patent office at Bern.

In 1905, at age 26, he published the first of five major research papers. The first one provided a theory explaining Brownian movement, the zig-zag motion of microscopic particles in suspension.

The second paper laid the foundation for the photon, or quantum, theory of light.

In it he proposed that light is composed of separate packets of energy, called quanta or photons, that have some of the properties of particles and some of the properties of waves. A third paper contained the "special theory of relativity" which showed that time and motion are relative to the observer, if the speed of light is constant and the

natural laws are the same everywhere in the universe.

The fourth paper was a mathematical addition to the special theory of relativity. Here Einstein presented his famous formula,  $E = mc^2$ , known as the energy mass equivalence. In 1916, Einstein published his general theory of relativity.

In it he proposed that gravity is not a force, but a curve in the space-time continuum, created by the presence of mass.

Einstein spoke out frequently against nationalism, the exalting of one nation above all others. He opposed

war and violence and supported Zionism, the movement to establish a Jewish homeland in Palestine. When the Nazis came to power in 1933, they denounced his ideas. He then moved to the United States. In 1939 Einstein learned that two German chemists had split the uranium atom. Einstein wrote to President Franklin D. Roosevelt warning him that this scientific knowledge could lead to Germany developing an atomic bomb. He suggested the United States begin its own atomic bomb research.

- 1) all properties of matter and energy can be explained in a single mathematical formula.
- 2) light is composed of separate packets of energy.
- 3) time and motion are relative to the observer.
- 4) some solids emit electrons when struck by light.

Q39) England, France, Germany, Spain, the Netherlands, and Italy were the six original members of the EU.  
The EU

The European Union (EU) is a unique political and economic community with supranational and intergovernmental dimensions.

It is composed of twenty-seven member states primarily located in Europe.

In 1957, six European countries formed the European Economic Community (EEC) by the Treaty of Rome. Since then the EU has grown in size through the accession of new member states and has increased its powers by the addition of new policy areas to its remit. In 1993, the Maastricht Treaty established the base of the current legal framework.

The EU created a single market which seeks to guarantee the freedom of movement of people, goods, services and capital between member states.

It maintains a common trade policy, agricultural and fisheries policies, and a regional development policy. In 1999 the EU introduced a common currency, the euro, which has been adopted by thirteen member states.

It has also developed a role in foreign policy, and in justice and home affairs.

Passport control and customs checks between many member states were abolished under the Schengen Agreement.

With over 492 million citizens the EU generates an estimated nominal GDP of €8.6 (\$10.7) trillion in 2007.

It represents its members in the WTO and observes the G8 summits.

Twenty EU countries are members of NATO.

Important institutions of the EU include the European Commission, the European Parliament, the Council of the European Union, the European Council, the European Court of Justice and the European Central Bank.

EU citizens elect the Parliament every five years.
